

Noshen Habib

AI/ML Engineer

[✉ noshen@berkeley.edu](mailto:noshen@berkeley.edu) [🐙 noshen-aiml-projects.github.io](https://github.com/noshen-aiml-projects) [🌐 noshen-habib](https://www.linkedin.com/in/noshen-habib) [🔗 noshen-aiml-projects](https://github.com/noshen-aiml-projects)

Education

MIDS	University of California, Berkeley , Information and Data Science	Dec 2026
	• GPA: 3.93 (expected graduation December 2026)	
BSc	Ontario Tech University , Computer Science	Apr 2024
	• Honors thesis: ML classifiers for anomaly detection on automotive CAN bus intrusion datasets, reaching 86–93% detection accuracy; +5% via feature engineering, time-series modeling, and causal inference.	

Experience

Bytespace , AI/ML Engineering Intern, Research Lead	June 2026 – present 4 months
• Lead a research team designing and executing systematic ML experiments, from problem framing through production deployment, using agentic AI tools and structured research workflows.	
• Built and evaluated content classifiers and task-specific models with supervised fine-tuning (SFT), LoRA, quantization, and distillation; designed custom evaluation frameworks to benchmark accuracy, reliability, and failure modes.	
• Engineered reusable AI skills and modular agent components for browser automation and tool use; iterated on prompt design and feedback loops to improve structured task performance.	
WiCDS , Machine Learning Engineer	Feb 2026 – May 2026 3 months
• Partnered with the Hayward Parks Department to design a weighted scoring model that ranks infrastructure maintenance requests by urgency, impact, and equity, applying model-fairness principles across demographic groups.	
• Contributed NLP and model evaluation work to team research; translated civic stakeholders' domain needs into ML problem frames.	
IBM , Software Engineer	May 2024 – May 2025 1 year 1 month
• Designed and deployed automation pipelines across 10+ client production environments using Ansible and Terraform, eliminating manual deployment bottlenecks.	
• Optimized cloud resource usage by 15% through cost-analysis reporting across AWS and Azure.	
IBM , Software Engineer Intern	May 2022 – Apr 2024 2 years
• Led security analytics and threat remediation initiatives, resolving 60+ compliance violations in production.	
• Built automated upgrade pipelines in a Jenkins CI/CD framework for reliable, zero-downtime deployments across prod, non-prod, and dev environments.	
Ontario Tech University , Teaching Assistant, Computer Science	Jan 2022 – Apr 2024 2 years 4 months
• TA for CS Fundamentals (Winter 2022) and the Computer Science department (Fall 2023 – Winter 2024).	

Projects

Pipeline Tag Prediction from Model Cards

2026

- Fine-tuned RoBERTa and ModernBERT to predict a Hugging Face model's task from ~145K cleaned model cards, outperforming a TF-IDF + logistic regression baseline; ran a data-scaling ablation.

Flight Delay Prediction

2026

- Built a scalable ML pipeline predicting flight delays two hours before departure from large-scale flight and weather data; engineered time-aware features and benchmarked multiple classifiers.

AI-Powered ASL Avatars

2025

- Designed a randomized controlled trial evaluating how AI-generated signing avatars affect attention, comprehension, and cognitive load for Deaf viewers.

Fungal Species Classifier (HackHive, Bronze Winner)

2024

- Built a multimodal image + metadata classifier on expert-curated data; evaluated model uncertainty and robustness to distribution shift.

Technical Skills

ML & AI: PyTorch, Transformers, LLMs, NLP, supervised fine-tuning, LoRA, quantization, distillation, pruning, custom evals, model fairness, agentic workflows

Data & Infrastructure: SQL, Spark/Hadoop, Docker, AWS, Azure, CI/CD (Jenkins), Ansible, Terraform, Git/GitHub

Programming: Python, C, C++, Java
